

Get smarter about your business

With the Enphase Commercial Solution this is easy.

The Enphase Commercial Solution achieves superior margins by maximising energy harvest and reducing lifetime O&M costs, including inverter replacement costs required by many competing providers.

'Our 50kW Enphase System covers 40 percent of the business' total electricity requirements and saves us approximately \$18,000 in energy costs annually, with an expected payback period of less than five years.'

—Scott Brandon, owner of Bright Brewery in Bright, Victoria

Higher savings

- Higher cash flow and internal rate of return means lower levelised cost of energy.
- Higher energy harvest means cost savings from day 1.
- No single point of system failure means no money spent on emergency repairs.

Low O&M cost

- Remote monitoring means better, more efficient customer service.
- Remote diagnosis means better planning, fewer truck rolls and less time on site.
- No single point of system failure means fewer service calls and only scheduled maintenance.

Safe and Reliable Solar

- No high-voltage DC means lower personnel costs thanks to an all AC architecture.
- 1 million power-on hours of equipment testing means high quality microinverters on your roof.
- No single point of system failure means reliable energy harvest every day.

Choose the proven leader

Make the smarter choice with Enphase for your business.

Backed by Enphase's safe and reliable microinverter technology, the Enphase Commercial Solution encompasses every step of the project development timeline, with a combination of in-house support and partnership networks to help streamline system design, installation, monitoring, and maintenance.

Enphase Microinverters

- Operate independently, so each panel performs to its fullest. One shaded or dirty panel won't affect the rest of the system.
- Produce more at dawn, dusk, and in low-light conditions, for a longer solar day thanks to burst technology.

Enphase Monitoring

- Allows you to track your energy production in real time with Enphase Enlighten software.
- Makes it easy to view your system's performance and monitor its health.
- Enables your installer to troubleshoot remotely.

Why Enphase

Enphase Energy is a global energy company that combines intelligent technology with an innovative distributed architecture that seamlessly integrates generation, storage, management and control. Our mission is to deliver solutions that make clean energy affordable, reliable, and accessible to all.

Proven

- Sixth generation microinverter technology with proven reliability.
- 661,000 installations in more than 100 countries.
- 3GW (DC) power generation capacity.
- Traded on NASDAQ since 2012.

Trusted

- #1 residential monitoring solution in the world.
- Selected by five of the top eight U.S. residential solar financing companies.

Strong

- Founded in California in 2006.
- State-of-the-art R&D facilities in California and New Zealand.
- ISO 9001 and 14001 certified.
